Four simple steps to set up your new button

Loosen the locking screws on the ring nut to adjust its position to the desired center shot.

Use the supplied pin to tighten the button and avoid unwanted loosening.

Loosen the clamping knob by half a turn to enable clicks in the adjustment.

Use the rear adjustment knob to increase or decrease the spring hardness. The knob allows adjustment in quarter-turn increments. If this adjustment isn't sufficient. You can use the supplied springs of different spring hardness.
