

### New InBest Pro 2.0

The new InBest Pro 2.0 has been developed to deliver superior performance when cutting a wide range of graphic materials, from the most flexible to the most demanding semi-rigid substrates.

### Improved Lifting System

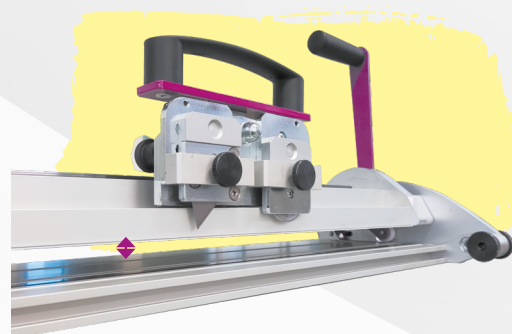

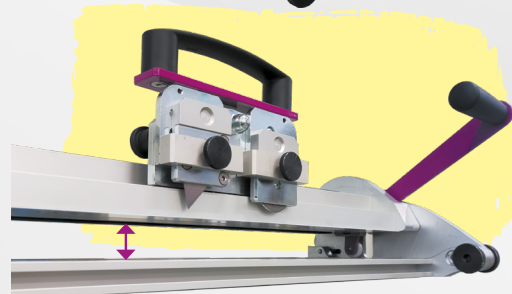

**Version 2.0 features a completely redesigned mechanism that significantly enhances usability and cutting precision.**

#### Parallel Movement to the Base

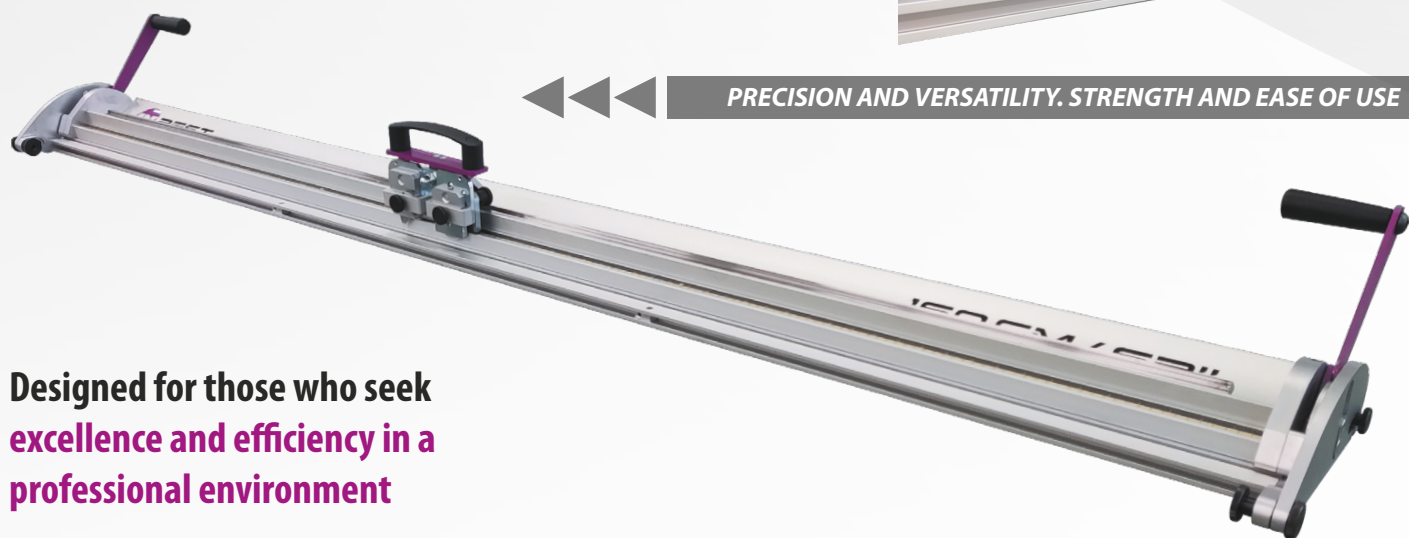

The head guide lifts perfectly parallel to the base, maintaining alignment with the material's surface. This ensures full visibility of the cutting line along the entire length of the cut, regardless of the material's thickness.

#### Semi-Raised Position

The semi-raised position keeps the cutter securely suspended just above the material, eliminating the need for manual support. This system enables more accurate guide alignment, improves user ergonomics, and increases overall cutting efficiency.

PRECISION AND VERSATILITY. STRENGTH AND EASE OF USE

**Designed for those who seek excellence and efficiency in a professional environment**

#### High Precision

Exclusive linear bearing system. Robust construction with integrated aluminium base. Designed for continuous and demanding professional use.

#### Double Cutting Base

Narrow slot for standard blade (general use) and cutting base for circular blade. Easily switch between both positions depending on the required cutting type.

#### Integrated Lifting System

Facilitates material loading and positioning, increasing productivity. The equipment must be secured to a table or workbench.
