

## MAKE SWIM COACHING EASIER WITH BONE CONDUCTION TECHNOLOGY

We know how difficult it can be to communicate with swimmers during training. High volume and poor acoustics in swimming pools force coaches to scream to be heard by the swimmers, and while swimming they don't hear you at all.

With the help of bone conduction technology and Olander Aquatalk you will solve those problems and at the same time enjoy a more satisfying and productive workout.

### Olander Aquatalk - An amazing product

By using Olander Aquatalk the coach is able to talk with the swimmers while swimming live and in real time. Give instant feedback to the swimmers when they need it. Improve technique, stroke rate, pacing in all strokes. Improve swimming in ways you never thought possible.

#### Quick Overview

Instant feedback on swimmers technique or speed without need to take a brake

Coach is able to talk to swimmers when they swim down to 1 m under the surface

Active rest by slow swimming between exercises made possible when coach at the same time is able to provide information about next set

The coach does not need to strain the voice to be heard by all swimmers during training.

3 Channels for multiple coaches/training groups

Connect to a MP3 player or smartphone for a fun work out for the whole team.

Easy to use - turn on, pair channels and go.

No annoying earplug head sets. Perfect sound even in combination with silicone earplugs.

Reach 150 m and down to 1 m under surface. Note: In salt water only at surface.

A set of Olander Aquatalk contains:

**10 x Swimmers bone conduction headset** with chargers. **1 x Coach Unit**, transmitter with microphone and charger. **10 silicone swim caps**, to keep the headsets steady. A set can be supplemented with up to two additional Coach units, since 3 channels can be used by multiple coaches in the same area, and as many additional Swimmers headsets as you need to equip all swimmers.

A **Super set** of Olander Aquatalk contains: **30 x Swimmers bone conduction headset** with charger. **3 x Coach Unit**, transmitters with microphones and chargers. **30 silicone swim caps**, to keep the headsets steady

### Bone Conduction technology

Olander Aquatalk allows the swimmers to hear the same high quality sound while swimming that they are accustomed to hearing while talking face to face. Using bone conduction technology you eliminate any earplug issues such as not sealing or falling out of the ear. Bone conduction hearing is a safe, well-established hearing mechanism that the Olander Aquatalk leverages on to give super clear instruction to the swimmer. How Bone Conduction works: The sound processor picks up sound waves in much the same way as a conventional hearing aid. But instead of sending them through your ear canal, it transforms them into sound vibrations and sends them through your skull. In this way the vibrations travel directly to your inner ear, bypassing any problems in your outer and/or middle ear even when you ear is full of water or use of silicone earplugs.

The Olander Aquatalk is designed for the European market, CE approved and comes with charger with EU plugs.
