

COMPANION

Companion is an all-round speech amplifier that works equally well for those with or without an existing hearing instrument. Current hearing instrument users will find Companion easy to use via a neck loop and those without an existing device can choose from different headset options.

Speech amplifier

Companion can help in a variety of situations in which background noise can be a problem, such as hearing TV sound, personal conversations, conference rooms and in public settings with an inductive loop. Companion also works very well in temporary situations, such as hospital visits. We have designed Companion with ease of use in mind, therefore it has large, robust controls. It is easy to change batteries and the battery life is long.

Key features and benefits

- ✓ Easy to use - volume control wheel - On/Off
- ✓ Long battery life time (app. 200 hours)
- ✓ Standard AA batteries (included)
- ✓ Proven sound quality
- ✓ Strong amplification
- ✓ Telecoil (T mode)
- ✓ Possible to lock in microphone mode
- ✓ Preferred speech amplifier among audiologists and hearing healthcare in several countries

COMPANION

Technical data

Max. acoustic amplification:	160 dB (Can be damped with 16 dB with gain control)
Max. acoustic output level:	125 dB SPL
Frequency Range:	200 Hz - 10 kHz
Bass Reduction:	-10 dB at 200Hz
Telecoil Sensitivity:	93 dB SPL, 1 kHz, 10 mA/m
Power Consumption	Closed circuit current 7 mA
Battery Life:	Approx. 200 hours with headphones
Type of Battery:	2 x 1,5 V penlight (LR6/AA)
Dimensions:	105 x 100 x 43 mm
Weight:	94 g (including batteries)
