

EURO SHOWERS

Shower Hose Fitting

The shower Hose has two female nuts (both with ½” female threads).

One nut needs to take the shower head (which is male ½” thread) and the other nut is to attach to the shower source (also ½” male thread).

Do not forget the washers otherwise the joints will drip.

Hand tighten only!

Cleaning

We always recommend cleaning the Shower Head (and the Shower Hose) with hot soapy water.

Avoid strong chemicals and abrasives.

We advise to wash away any shampoo or soap drips.

Some Shower Heads have silicon rubber jets.

To remove any built up limescale rub the jets periodically with your finger tips.

If you decide to clean the Shower Head with a proprietary cleaning chemical – take care to follow the instruction on the packet.
