

Art.-Nr. 05-10020

Fly Killer Exocutor 40

with electric grid

Description

Easily identified at the bright green light! The Synergetic tubes were developed to attract a much broader spectrum of flying insects than the classic blue UV tubes are able to.

The patent-protected technology, based on a unique phosphor mix, sends rays at a wide dual wavelength (368nm / 540nm) and attracts thereby plenty of insects. For example are the greenhouse whitefly, thrips, leafhoppers and many different kinds of moths much more attracted than from traditional blue UV light. So the dual wavelengths offer you the best from both technologies. Comprehensive studies over several years, conducted by independent entomologists and laboratories, acknowledge the advantages of the green lights in combination with UV.

- unique ribs at the corners for a light output all around
- shifted tubes for the maximum amount of emitting light
- aluminium reflectors increase the light emission
- the high-efficient electric grid prevents that insects escape through the large catching area
- stainless steel casing
- automatic power cut-off when removing the extra-deep collecting pan
- suitable for wall and ceiling mounting and as standing unit
- 2 Synergetic tubes of 18 W
- coverage 240 m²

Technical data

	Electric power:	36 W
	Voltage:	230V
	Supply frequency:	50Hz
	Width x depth x height:	694 x 140 x 265 mm
	Net-weight:	5 kg
