Operating instructions

Battery placement:

Place the battery with

The + towards the inside

A365-Ultra 2.0 365nm Longwave UVA Flashlight

Battery handling:

Fully charge the battery before first usage! Most new batteries are in storage mode and need to be charged as soon as possible! The A365-Ultra 2.0 must be used with two rechargeable 26650 Lithium-Ion batteries (>5000mAh, minimum 10A discharge type). 18650 type Lithium-ion battery (>3400mAh, minimum 10A discharge type) can also be used with the included spacers. When the battery is almost empty, the flashlight will start to flash and eventually will shut down the lamp. When flashing starts, recharge the battery as soon as possible!

Warning:

1. Place the battery with the + to the inside. Reverse placement can destroy the flashlight and battery.
2. NEVER look directly into the light beam. This can damage your sight! Wear safety glasses! UVA radiation is invisible! UVA radiation can be harmful!
3. This lamp is NOT suitable for children, it is NOT a toy.
4. Don't aim the light beam directly to your skin. Exposure can damage the skin tissue! UVA radiation can be harmful!
5. Never point the light beam to any other living person or animal! UVA radiation can be harmful!
6. Do not operate the lamp for more than 10 minutes continuous. Use it with intervals to cool it down. Overheating the Led will cause it to fail.
7. Do not disassemble the flashlight or make any modifications. This will void the warranty.

Warranty:

The A365-Ultra 2.0 UV flashlight has a two year factory carry-in warranty. The warranty starts on the date of delivery. The warranty will void if the lamp is modified or broken due to fall, damage, improperly handling or battery leakage.

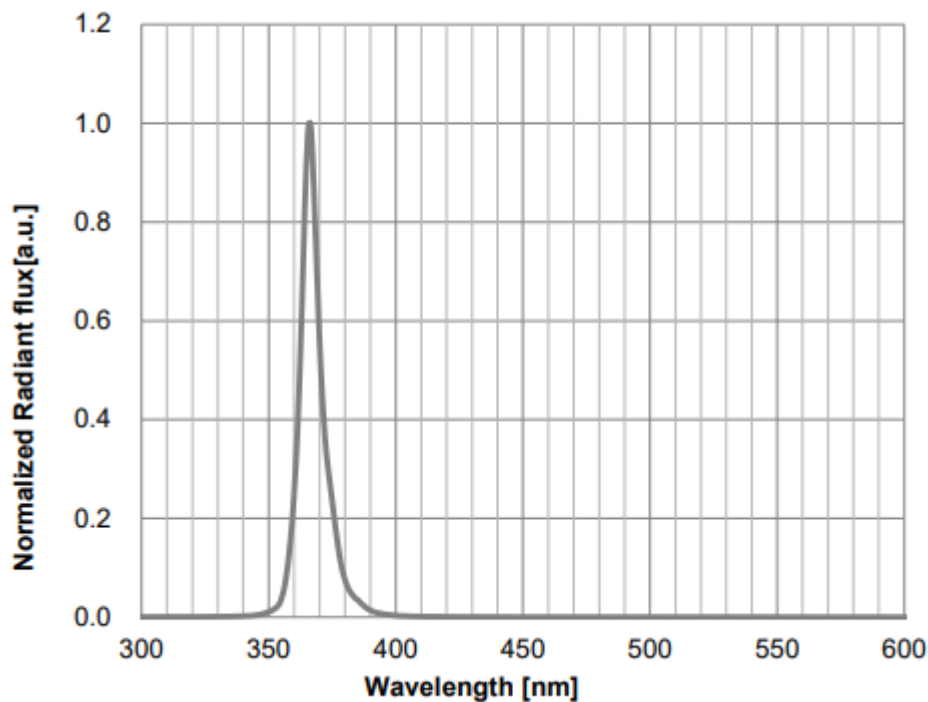

The fluorescent gasket can be used to have a visible indicator if the flashlight is on or off. Carefully unscrew the filterhood and push the filter out. Handle the glass filter with care. Replace the black gasket for the green fluorescing gasket and return the filterhood.
