

The standard shelf for stationary storage of fire department pressure hoses of all common sizes and lengths in galvanized design to extend the PREY product range.

PREY's mobile hose storage roll shelf - SLR for short - is the most solid and space-saving of its kind. It is made of galvanized angle, flat and round steel profiles and accommodates more hoses in a defined area with given stability than any other.

The stationary hose storage stand shelf - SLS for short - serves as a cheaper alternative to PREY's hose storage roll shelf SLR. It consists of galvanized, special edge profiles with cross bracing.

The SLS has three trapezoid shaped storage levels with integrated moisture collection and drainage channels and is designed for up to four levels, which can either be supplied with the initial equipment or retrofitted and easily adjusted in height by screwless plug-in assembly. The SLS can also be easily widened in width by means of plug-in extension sets.

Technical specification:

Ordernumber:	1-007-070120
Indication:	Hose Storage Stand Shelf
Type:	SLS
Measurement:	530 x 1060 x 220 (TxBxH) (per field).
Weight:	50
Capacity	
- hose capacity:	24 B / 33 C (for 4 storage levels)
- hose lengths:	to 40 m B

- hose types:	All known materials
Functions:	shelve
Operating Mode:	One man operation
Installation type:	freestanding
Optional equipment:	Add-on shelf unit
	Storage level
