

TEXPORT Fire Recon Wildland

No compromises in fighting forest fires

When forests and vegetation go up in flames, fire fighters are confronted with very specific challenges and dangers. Hardly any specialisation in the area of firefighting is as much in demand right now as fighting forest and vegetation fires, and this increases the demands made on manufacturers of firefighting attire and protective clothing.

From Salzburg to the world

In the heart of Europe, or more precisely in the world-famous city of Salzburg in Austria, one highly specialised manufacturer has been dedicated to the development and fabrication of protective clothing for firefighters for more than three decades. TEXPORT, a family-owned company, has not only managed to become 'Number 1' in Europe with its innovative products but has extended its roadmap to success to encompass the whole world.

Special requirements demand special solutions

In our headquarters in Salzburg, we recognized very early on that the increase in forest fires and vegetation fires would bring with it increasing challenges and we started looking for solutions. These solutions were found in a newly created product line called Fire Recon Wildland.

In it, the sum total of our experience

as craftsmen meets the most advanced materials to create a 'masterpiece' for firefighters.

'In vegetation fires, firefighters are subjected to different conditions and challenges than, say, in an interior rescue inside a burning house,' says Ms Nicole Heinemann, a member of our executive staff, and she adds: 'With the Fire Recon Wildland Collection, we have succeeded in providing firefighters with a never-before-seen precision fit and with it greater comfort, which has a positive effect when performing physically difficult actions outdoors.'

But if the Fire Recon Wildland label is on something, there is a whole lot more high-tech development behind it. Not only were we able to achieve an exceptionally high breathability with the single-layer construction but we also succeeded in reducing the weight to a minimum.

Both properties are of extremely high importance, especially in the case of fire calls in the fields and brush, where it is vitally important that sweat be wicked away from the body as fast as possible, so that the physical performance of the person wearing our gear remains as high as possible for as long as possible. This reduces the risk that the firefighter will suffer heatstroke. The light weight of the jacket and trousers in turn has a positive effect on both wear comfort and range of movement.

The option of combining the jacket and

trousers into a single, closed unit without much effort keeps the increasing heat from penetrating this system from the ground and also keeps dust and dirt from penetrating it. The feedback that TEXPORT has received from real-life practice and experience makes itself known in these and many other details, as it was taken into consideration in the development phase.

Dedicated to quality

However, decades of experience and the most modern materials are not enough for the ambitious specialists in Salzburg. An enormous amount of attention is devoted to the quality of production. Our products are made in our own very modern workshops right here in Europe. Inherent in the words 'Made in Europe' is the promise that every single customer can depend on every stitch, every cut and every step in our work will be performed with perfect craftsmanship. One hundred per cent quality control also guarantees that all our items of clothing will be sent to clients all over the globe in perfect condition.

Regardless of where in the world firefighters are being sent on their missions, they can all depend on the specialists in the beautiful city of Salzburg in Austria who dedicate their daily work to the greatest challenge of all: PROTECTING YOU!
