

The universal !!! The most compact and at the same time most stable on the market for fire hoses of all sizes and lengths in the high quality workmanship and sophisticated design of the PREY equipment family.

The PREY mobile hose storage roll shelf - SLR for short - is the most solid and space-saving of its kind. It consists of galvanized angle, flat and round steel profiles and accommodates more hoses in a defined area with a given stability than any other.

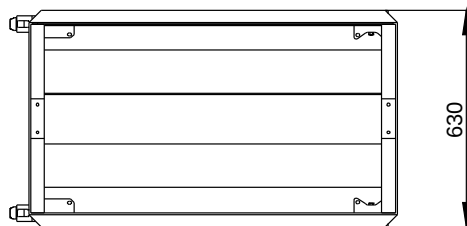

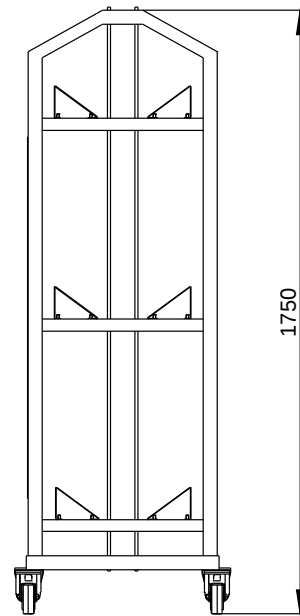

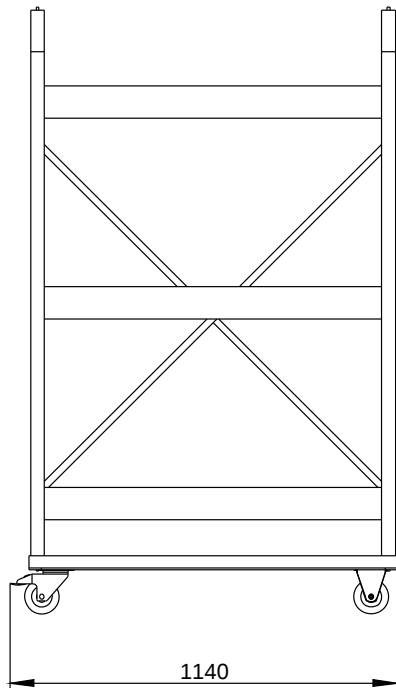

The placement of the two fixed and two swivel castors with parking brakes under the base frame prevents objects and people from getting caught behind them. They consist of heavy-duty stainless steel blocks with smooth-running bearings and particularly quiet, floor-protecting rubber pads for increased driving comfort of the SLR. The base frame itself has angled corners to protect wall reveals and door frames when pushed through.

The SLR has three storage levels and is designed for up to four levels, which can optionally be supplied with the initial equipment or upgraded. It is a basic component of all our room planning and an integral part of any functionally room planning for hose maintenance facilities.

Technical specification:

Ordernumber:	1-007-070110
Indication:	Schlauch-Lager-Rollregal
Type	SLR
Measurement:	630 x 1140 x 1750 (TxBxH)
Weight:	62 kg
Capacity	
- hose capacity:	31 B / 43 C (for 4 storage levels)
- hose lengths:	to 40 m B
- hose types:	All known materials

Funktionen:	shelve
	transportation
Operating Mode:	One man operation
Installation type:	mobile
Optional equipment:	Storage level
