

The guarantee of dry, disinfected and deodorized equipment

We have designed a sanitizing cabinet integrating a drying, deodorizing and disinfecting system that allows you to offer a healthy equipment to your employees. In addition to its heating function, the cabinet is equipped with BioZone[®] technology. This powerful disinfection process using trioxygen destroys 99.9% of viruses and bacteria and also eliminates odors very quickly. Thanks to its drying, disinfecting and deodorizing action on all types of equipment, the cabinet improves working conditions, providing real safety against the risk of contagion and unparalleled comfort for all those working in sometimes difficult conditions.

BioZone[®] technology

Interior shelf

DESCRIPTION

- BioZone[®] technology : use of trioxygen, 50 times more effective than chlorine against viruses and bacteria
- Clothes rail and a wire shelf
- Galvanized steel 15/10th thickness
- One-piece cabinet
- Doors with 3 point lock
- Doors on hinges that cannot be removed
- Adjustable leveling feet
- Forced-air heating dryer
- Wet air extraction system
- 1680 watts power
- On/Off switch starting the disinfection and drying cycle
- Adjustable drying time by timer

AVAILABLE OPTIONS

Wire shelves

Blowing tube for drying shoes, boots, gloves

Clothes rail

Gloves rack

SAFETY STANDARDS

CE marking
IP21 thermal resistance class
Thermal protection against overheating
