DELIBERATELY LIGHT AND BREATHABLE

The requirements and deployment scenarios for technical assistance, and the associated use of light protective clothing, is increasing significantly.

With its brand-new FIRE RECON THL series, TEXPORT® offers the highest technical standard available today and raises the bar in terms of comfort and fit.

The single-layer construction ensures excellent breathability. This is especially important for optimally wicking moisture, such as sweat, away from the body, thereby maintaining the performance capabilities of the wearer. At the same time, this reduces the risk of the body overheating.

The option of joining the jacket and trousers into a closed system prevents the penetration of rising heat and other hazardous materials. The adjustable closures on the trouser hem and cuffs also aid in this, providing the wearer with optimal protection under the special demands providing of technical assistance.

Thanks to the special yellow, high-visibility colour, the human silhouette is provided with optimal visibility in darkness and inclement weather.

Deliberately designed as light clothing, the Fire Recon THL can also be used for fighting forest and vegetation fires. The Fire Recon is also available in a Wildland variant with different colouration. Available from October 2022.
