Methodology

Environmental Impact Assessment

<p>Functional unit</p>	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense). The functional unit of this analysis is "16 set(s) of adhesive notes for the purpose of writing".</p>
<p>Impact Indicator</p>	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
<p>Electricity impact calculation method</p>	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
<p>Hypothesis</p>	<p>The Product's material composition is supplemented by secondary information, if necessary, as shown in the list below.</p> <ul style="list-style-type: none"> - paper: paper 99% - binding: adhesive 1% <p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

Environmental Impact Assessment

System Boundaries

The scope of this research includes the complete lifecycle of a stack of sticky notes from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

Exclusions

The impact of secondary packaging and writing utensils are excluded from this assessment.

Results

4.552.617 (sold in SE)

Climate Change

Step	Impact (kg CO ₂ eq)	Percentage (%)
Raw Material Extraction and Processing	1.27	58.04 %
End-of-Life Treatment	0.43	19.68 %
Transportation and Distribution	0.27	12.44 %
Manufacturing	0.22	9.84 %
TOTAL	2.19	100.00 %

4.552.617 (sold in SE)

Climate Change - Raw Material Extraction and Processing

● Sourcing of raw material (adhesive) ● Sourcing of raw material (coloured kraft paper)

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
Sourcing of raw material (coloured kraft paper)	1	1.09	1.22	96.52 %
Sourcing of raw material (adhesive)	2	8.09 · 10 ⁻³	0.04	3.48 %

--	--	--	--	--

--	--	--	--	--

TOTAL			1.27	100.00 %
-------	--	--	------	----------

4.552.617 (sold in SE)

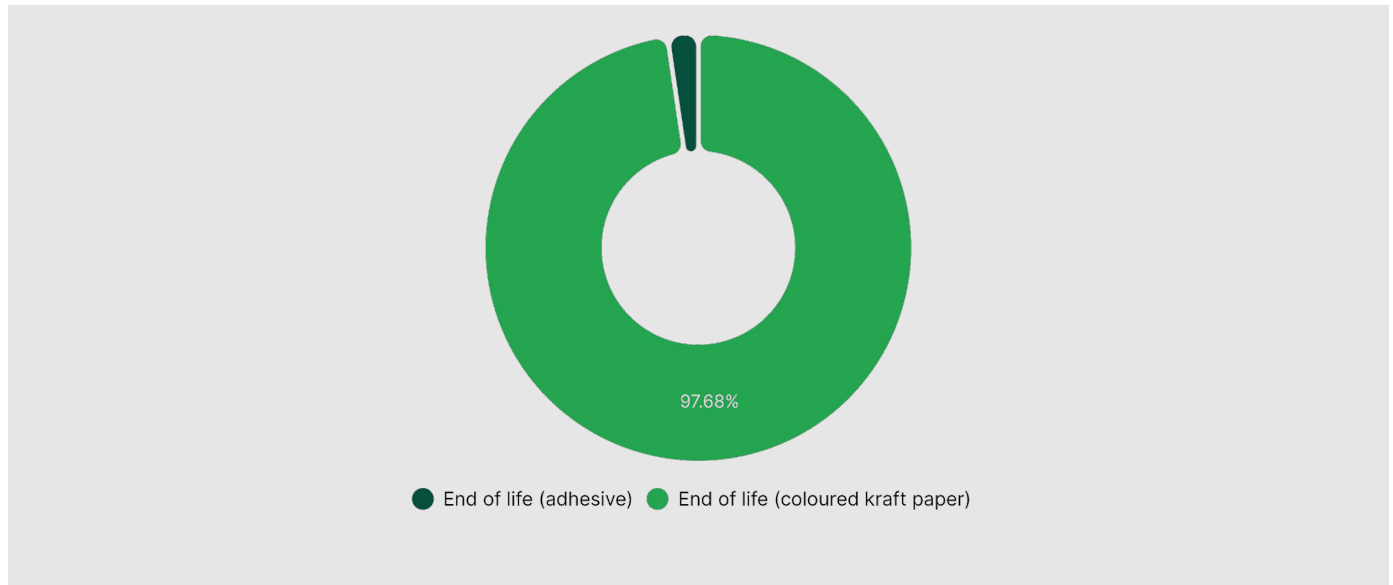

Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Electricity usage during material transformation (coloured kraft paper)	3	0.39	170.85	79.44 %
Natural gas usage during material transformation (coloured kraft paper)	4	0.21	37.59	17.48 %
Electricity usage during material transformation (adhesive)	3	0.02	6.64	3.09 %
TOTAL			215.08	100.00 %

4.552.617 (sold in SE)

Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
End of life (coloured kraft paper)	7	0.73	420.02	97.68 %
End of life (adhesive)	6	7.36 · 10 ⁻³	9.96	2.32 %
TOTAL			429.98	100.00 %
