

Volvo G 88/89 Conversion Kit

Instruction Set

Resin kit Scale 1:24

Guidance and management of resin

First i want to give you some information about resin.

Handling

All parts of resin dust is not good to your health, always use facemask or respiratory protection when sanding, cutting and filling resin.

The support material is left to protect the parts during transport and should be removed with great care. The parts are fragile and can be broken off by carelessness. They can be repaired with super glue and filler.

Assembly

Use superglue for all resin to resin/plastic/metal joints or any kind of epoxy. All minor repairs can be done with standard fillers.

Wash all parts in soapy water after preparing parts of assembly and let it dry. Make sure to sand all surfaces on all joints to get a good bond.

Preparing for paint

Wash all parts in soapy water and use a toothbrush to make sure to get rid of all unwanted particles.

Let it dry properly and handle the model with rubber gloves all the time before paint. I recommend use white or grey primer as a base undercoat to cover the entire model.

Topcoat of any choice will now be accepted.

Accessories and spare parts

You can find accessories in the shop to add more items such as boggi axles and roof racks, cab ladder, rims etc.

If parts are missing or not repairable, send us an mail and we sort it out.

Email: order@nordictruckdetails.com

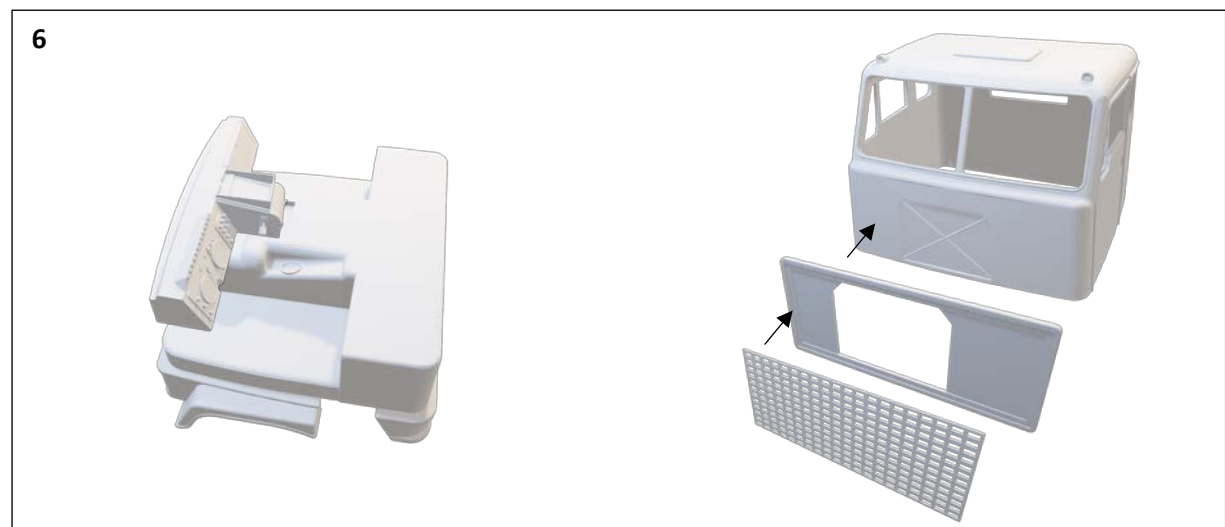

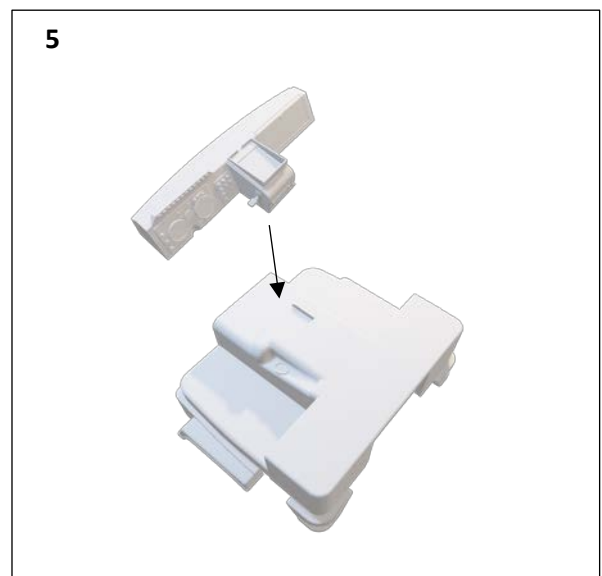

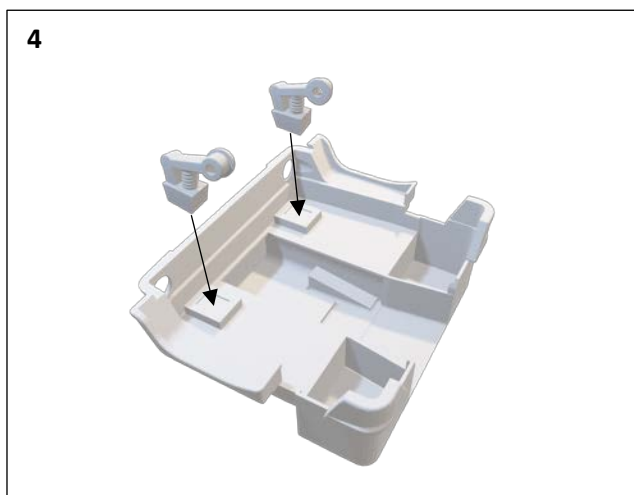

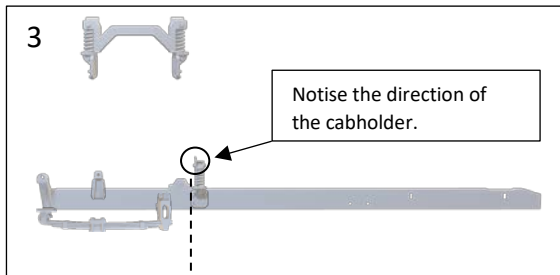

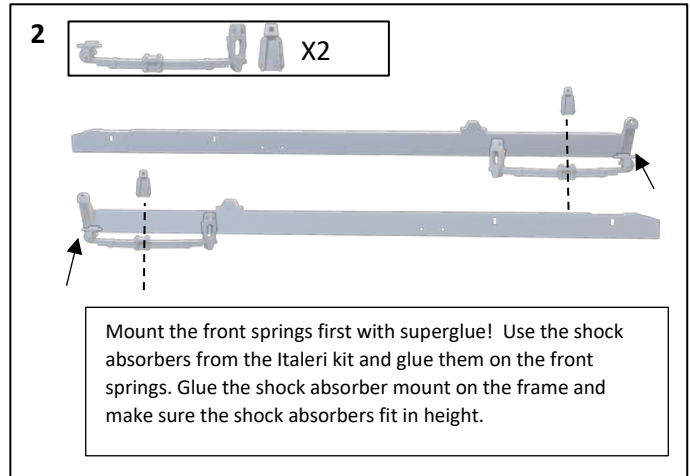

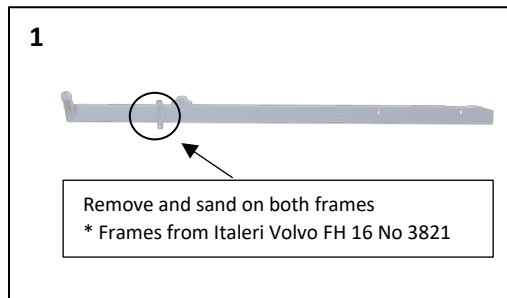

Please visit the shop: www.nordictruckdetails.com

The donor kit

The Volvo G88/89 is based on Italeri Volvo FH16 No: 3821 as a donor.

The chassis, engine, axles, air tanks, window visors etc. can be used to complete this model by parts from the donor kit.
