

NORTH FORK 358

.358 Dia.	270 gr.	Sec. Density .301
FIV 1800-3200FPS	Length 1.414"	
PIV 1900-3100FPS		

This is another in our line of heavy game bullets. As with the other calibers, the 358-270 is built much stronger than the other bullets in the same caliber. Just like the other HG bullets, it is designed for elk up. It is the preferred weight for the big bears. It also is preferred for all African plains game hunting. I have no reports of anyone recovering one, yet.
