

NORTH FORK 358

.358 Dia.	225 gr.	Sec. Density .250
FIV 1700-3100	Length 1.186"	
PIV 1800-3000		

The 358-225 is a good all around bullet for the 35 Whelen. It will open well on deer, hold up well on hogs, and will also work on elk. If elk is the primary quarry, I would recommend the 250 gr. even in the 35 Whelen.

No Pictures are available at this time but performance is similar to the 358-250.
