

NORTH FORK 358

.358 Dia.	200 gr.	Sec. Density .223
FIV 1500-3100		Length 1 .069"
PIV 1600-3000		

This is another of the line that was originally designed for use as a pistol bullet. It also handled the maximum velocity from a 358 Norma Mag. Although this bullet obviously can handle some very high velocities, I picture its best use to be on deer or hog size game from either pistols or rifles. The only reports back on the field experience with this bullet were with deer shot with rifles. All shots were clear through, including lengthwise, and no bullets were recovered.
