

NORTH FORK 458

.458 Dia.	gr.450	Sec. Density .306
FIV 1700-2700		Length 1.460"
PIV 2000-2600		

This is the heavy weight of the line. It is suitable for any game that an expanding 458 should be used on. From Alaskan bears and moose to the largest African eland and Cape buffalo. I have reached 2300fps from a 26" 458 and the bullet is nowhere close to failure. I don't actually know what the upper limit of the bullet would be but I do know, for sure, that I don't want to fire the gun that could generate the kind of velocity needed to find out. The Lott should be capable of 2400fps and would put the bullet in the center of its operating range. Have fun off the bench! I didn't.
