

Drawing Corner

Our goal is to create a pleasant atmosphere for children in unfamiliar surroundings that distract their attention from the expected examinations or treatment. Thanks to the drawing table, play house and interactive boards, little patients and their parents spend time in the waiting room in a relaxed atmosphere without undue stress. The drawing corner is also suitable for smaller spaces. Compact parts shape the tabletop and two fixed benches.

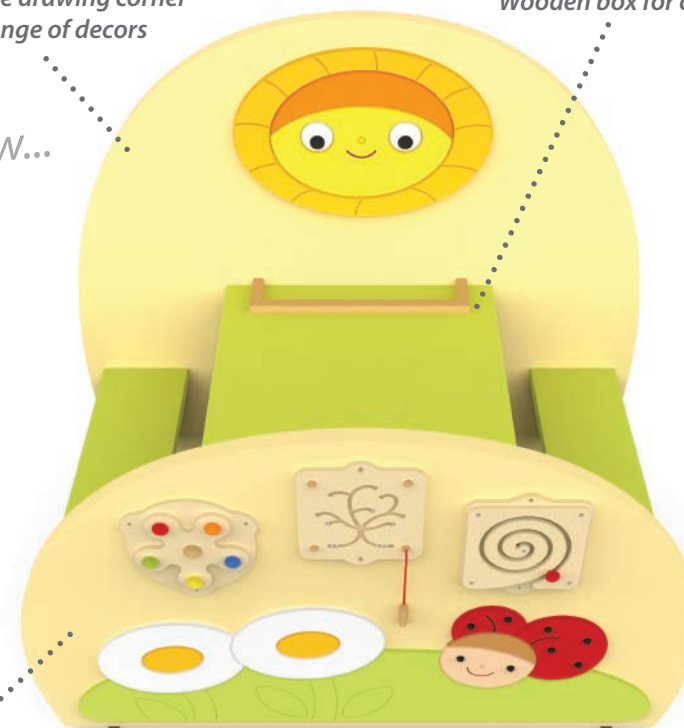

height 122 cm

Self-supporting construction of the drawing corner from quality laminate in a wide range of decors

Play and didactic elements "Big"

For several years now we have owned the design, construction and manufacture of our play and didactic elements.

The main emphasis has been on the selection of materials and the thoughtful design, complemented by the original pictures of our artist Eva Sýkorová.

Wall elements that develop fine motor skills and sensory perception complement LOKKI corners, walls, play panels and can be installed separately. Thanks to the high quality of natural materials the products are very durable and long-lasting.

Certified according to EN 71.
