

WL 10

END FEED MINIAPPLICATOR

- Feed adjustment innovative and simplified
- New design and lightened body
- Standard head
- Micrometric head (optional)
- Six digit counter

Mini-applicators to work in line terminals (end feed), a new concept, uses a particular power system with specially sized lever ratios, making it incredibly sweet and quiet use.

The support lever of the finger of power can be adjusted to zero clearance, even after long periods of operation, to ensure precision feeding of the terminals, especially those of small size.

Easy pitch adjustment, acting on two distinct points, there is the forward position and the position back, or from 33 mm pitch.

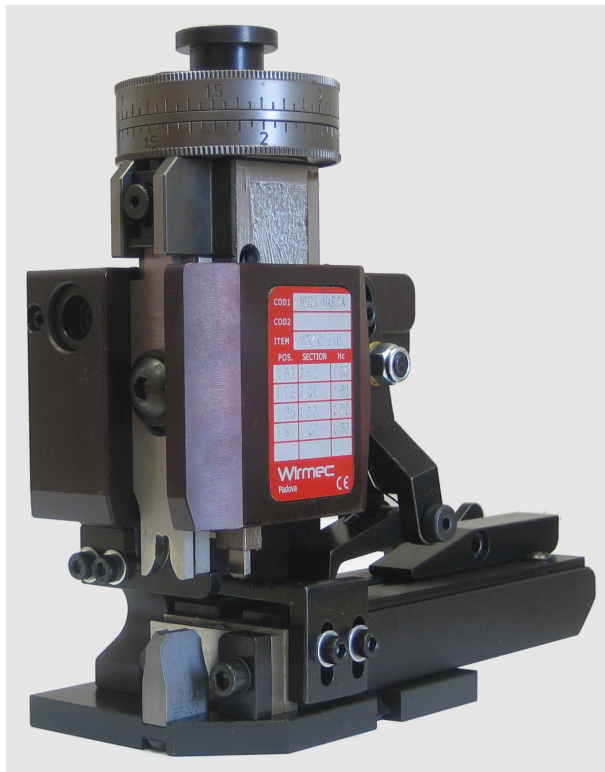

The special form and low weight make it easy to grip and handling the mini-applicators, working in foreign-exchange transactions, for security and stress that the operator uses.

The body is made of cast iron, while the scroll are hardened alloy steel.

They provided the necessary precautions for use on all types of stripper crimper on the market.

The Wirmec applicator, can be equipped with our patented micrometric head with a **regulation range 3 mm** (optional)

On request counter 6 digit non-resettable (optional)

WB 10

SIDE FEED MINIAPPLICATOR

- Feed adjustment innovative and simplified
- New design and lightened body
- Wheels with standard setting
- Wheels with centesimal regulation (optional)
- Six digit counter

Designed to work on flag terminal (side feed), has the same features and ergonomic techniques of linear mini-applicators. And 'specially designed for use in stripping-crimping machines, and automatic machines. In fact, back at the fold, facilitating not just give great visibility operations centering, in vending machines, and registration in-stripping crimping machine.

The Wirmec applicator, can be equipped with our patented micrometric head with a **regulation range 3 mm** (optional)

On request counter 6 digit non-resettable (optional)
