Rule out cross-contamination

Hygienic milking requires clean teats. Lely offers a pretreatment concept which mechanically cleans the teats. To rule-out cross contamination the brushes are cleaned and disinfected after every milking with a dedicated formulation of the Lely Astronaut pretreatment brush cleaning range. The Test strips for Lely Astronaut brush cleaning can be used to provide an easy and quick indication if the brush cleaning product applied on the brushes is sufficient.

Test strips for Lely Astronaut brush cleaning

To indicate the concentration of the brush cleaner, the Test strips for Lely Astronaut brush cleaning measures the component peracetic acid, which is the main active ingredient in the Lely Astronaut pretreatment brush cleaning range. When a sample is taken, always compare with the color scaling on the original aluminum container. Lely recommends carrying out this test on a weekly basis. Watch now this video on how to use the Test strips for Lely Astronaut cleaning.

Concentration indicator for the pretreatment brushes

- Quick and easy indication of concentration brush cleaning detergent
- No special storage requirements
- Direct measurement, no dilution required
