X.WST 3

SPECS

Sizes

XXS S
M L
XL XXXL

Weight

1550 g +/- 50 g (X-Pro Carbon)
1640 g +/- 50 g (X-Matrix²)

Homologation

ECE 22 06; DOT FMVSS218;
CCC and NBR 7471

1 PERFECT VENTILATION

Featuring six (6) closable air intakes and two (2) exhaust outlets the complex X.WST3's ventilation system is ready to adapt to all preferences and weather conditions.

2 CAPTURE THE FUN

Designed to keep your action camera securely and firmly in place riding, the new X.WST 3 Kit includes a removable side mount to capture all the action up close

3 MID AIRFLOW CHAMBER

This new patent pending system is created to keep a gap storage all around between the inner EPS and the out EPS, providing immediate circulation of fresh air around the head while exiting the hot air from the shell through the rear holes.

4 VISOR RECOIL SYSTEM

The new visor design includes NEXX's proven Recoil Visor System with its spring loaded base side plates that auto adjust and pull the visor back against the dual lip window beading for a perfect airtight seal working independently from the peak fitting system.

5 X-COM 3

Subtle yet packed with powerful capabilities, the new X-COM3 series can be fully integrated into the helmet, with built in earphones, battery, cable slots, microphone, and Bluetooth 5.2 technology, available in two variants: the X-COM3 standard, a mid range version with capable features and the X-COM3 PRO that brings 2.0 Mesh Technology alongside other extra features and world class sound by Harman Kardon.

6 LINING F.R.S (Fast Release System)

Easy to reach and even easier to operate Patent pending F.R.S® is the perfect solution for interior cleaning but most importantly allowing rescue personnel to easily remove the helmet with minimum friction in an injured rider's head, in case of an emergency. Simply lift the rubber trim arms that lock the buttons in both sides of the helmet, slide back the red buttons and both cheek pads are free to be fully removed.

7 SUN VISOR

18% bigger, with height enough to cover until just above the nose bridge.

8 REAR SPOILER

The X.WST3 is equipped with a double-blade air spoiler at the rear, designed to optimize aerodynamic performance and reduce turbulence at high speeds. A translucent spoiler extension improves stability at high speeds while boosting a streetfighter look.

9 ANTI VIBRATION EPS SYSTEM

The new anti vibration EPS system includes a special rubber trim settled between inner EPS and Outer EPS, allowing micromovements from the inner EPS that is in contact with the user's head. This helps to reduce the vibrations in the helmet caused by the air turbulence at higher speeds.

X.WST3

Sizes: XXS XS S - M L - XL XXXL

Weight: 1550 g +/- 50 g (X-Pro Carbon); 1640 g +/- 50 g (X-Matrix²)

Homologation: ECE 22 06; DOT FMVSS218; CCC and NBR 7471
