

RACE/SPORT

Y.100R

SPECS

Sizes

XS S M
L XL XXL

Weight

1575 g +/- 50 g (Polyfusion)

Homologation

ECE 22-06, DOT FMVSS 218;
CCC and NBR-7471:2001

1 ACTION CAMERA SUPPORT

Record all your travels and your best moments to remember them later. Practical and removable, one support for action cameras come included with the helmet, to facilitate its placement on the side of the helmet

2 REAR SPOILER

The Y.100R is equipped with a double blade air spoiler at the rear, designed to optimize aerodynamic performance and reduce turbulence at high speeds.

3 X-COM 3 MOTORCYCLE COMMUNICATION SYSTEM

Subtle yet packed with powerful capabilities, the new X-COM 3 series can be fully integrated into the helmet, with built in earphones, battery, cable slots, microphone, and Bluetooth 5.2 technology, available in two variants: the X-COM 3 standard, a mid range version with capable features and the X-COM3 PRO that brings 2.0 Mesh Technology alongside other extra features and world class sound by Harman Kardon.

4 SPORT'S REFINED INTERIOR

The new Y.100R interior offers a snug fit and more effective ventilation around the entire head contour for maximum comfort and distraction free in high speed riding. All interior parts, including the thick neck roll, are removable, skin friendly (Antiallergenic and Antibacterial properties) and made from soft touch X-Mat Dry fabrics that keep the interior cool, dry and comfortable.

5 IMPROVED AERODYNAMIC DESIGN

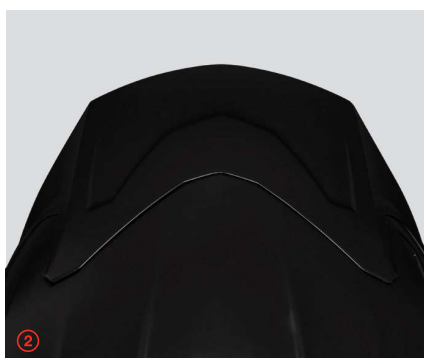

Updates to the aerodynamic design of the Y.100R further reduce flow separation and pressure drag, and by extension, enhancing stability and comfort at higher speeds.

6 SAFE & COMFY

All Y.100R are manufactured with Polyfusion shell technology, characterized by its compactness and with high impact resistance and available in two shell sizes for an outstanding fit and comfort.

7 VENTILATION AND AIRFLOW

The large upper vent and the extremely efficient chin ventilation system allow a large volume of cool air to enter the helmet. In turn, the dual EPS Liner includes an innovative air chamber between them: this allows a truly breathable helmet, with optimum exchange of warm, humid air with incoming cool, fresh air.
