CRYSTAL CLEAR ICE MAKER

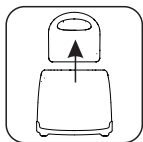

Quick Start Guide

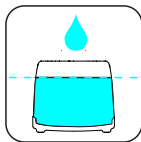

PRODUCT DESCRIPTION

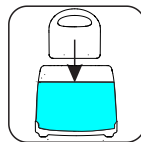

HOW TO USE

1 -Pull the silicone ice cube mold out of the plastic container.

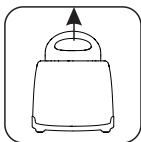

2 -Fill the plastic container with drinking water until the fill line is.

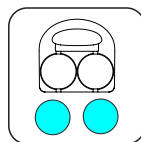

3 -Assemble the silicone mold halves and slowly lower into the water. The water should overflow into the fill holes of the mold.

4 -Place upright in the freezer for 24~30 hours for the best result.

5 -Remove the ice maker from the freezer and slowly pull out the silicone mold by pulling on the handle.

6 -Separated the two mold halves and serve the ice or store it for later in freezer.

TIPS

1. Warm drinking water (not boiling) yields the best results;
2. Kinds of water: spring water, purified water, warm boiled water;
3. Time may vary based on specific freezer conditions, for a powerful freezer it takes 24 hours and for lower power freezer it takes at least 30 hours;
4. To use the ice that is frozen at the bottom, put it under hot tap water so that the ice block drops out easily.

WARNING

1. It is not recommended to reuse the ice that is frozen at the bottom of the container otherwise, it will generate more bubbles in the next pair of ice cubes. To remove the ice from the bottom of the plastic container, we suggest filling it with warm water to melt and dislodge it.
2. DON'T move the ice cube mold after putting it into the freezer or it will create bubbles in the ice sphere.
3. Keep away from children.

GUARANTEE

This item is returnable once a defect, and it is highly appreciated if to send us the defect information so we will improve it.
